

Dog Breed Explorer

A curated look at dog breeds sourced from [TheDogAPI](#), cleaned and modeled through a daily dbt + DuckDB pipeline.

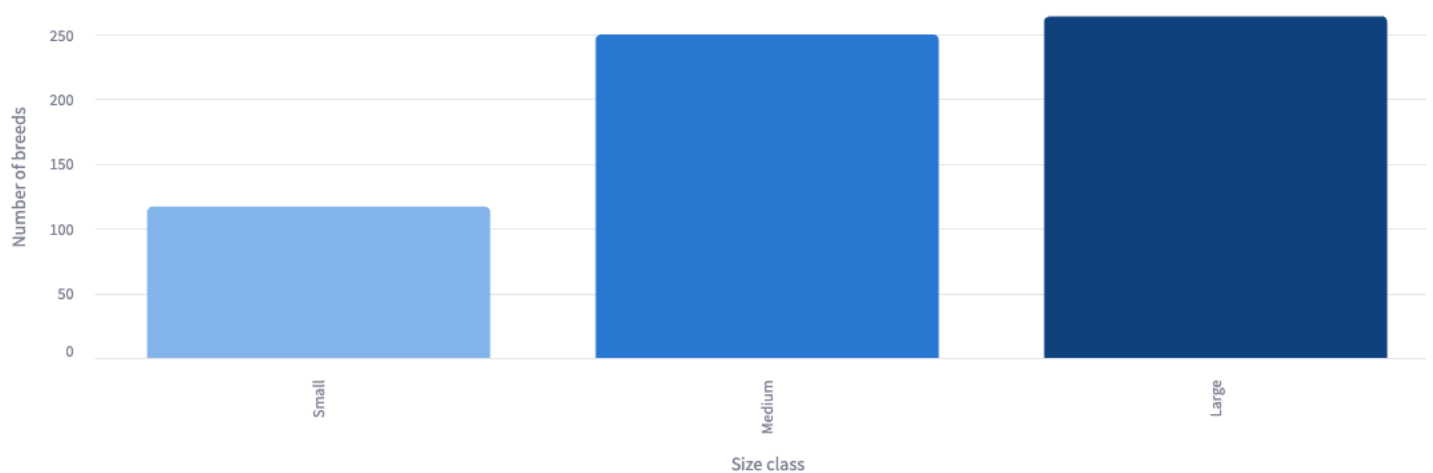

Data as of 2026-08-11 11:06 UTC · 631 breeds

Which breeds have the longest predicted life span?

Denmark Feist tops the list at an average predicted life span of **15.0 years**, against an overall average across all 591 breeds with life span data of **12.5 years**. The color coding shows size class doesn't cleanly predict a spot in this top 10 — the mix is 2 Small, 6 Medium, 2 Large, so being small isn't a requirement for a long predicted life span in this dataset.

How are breeds distributed across weight classes?

Large breeds (avg weight 25kg+) are the most common group, making up **42%** of all breeds in the dataset. Size classes are derived from each breed's average weight (midpoint of its min/max range), split at 10kg and 25kg thresholds.
